# 1 BUSINESS-REQUIREMENT:

---

## 1.1 PROBLEM STATEMENT:

The purpose of this application is to allow the company to manage customers very easily.

### 1.1.1 CRM Application:

The CRM Application allows you to:

1. Access the home page (**must show option to add customer, search by customer first name or last name and show list of customers with number of pages for pagination**).
2. Should list all customers (**should return data in pages and must have buttons as Asc and Desc in each column to sort list ascending or descending respectively**).
3. Should be able to add new customers.
4. It can have basic fields like S.No, First Name, Last Name, Email, Action and Customer Verified.
5. Should be able to edit, delete and verify any customer.
6. Should be able to search any customer on a first name or last name basis. (**should be implemented using custom query**).

## 2 TEMPLATE CODE STRUCTURE:

### 2.1 CUSTOMER CONTROLLER

---

Method Exposed	Purpose
listCustomers()	Should return page "list-customers" with required data.
showFormAndAdd()	Should return the page "add-customer-form"
saveCustomer()	Should save the customer and return "/customer/list"
showFormAndUpdate()	Should return the "update-customer-form" page.
deleteCustomer()	Should delete customer and return "/customer/list".
updateVerified()	Verify the customer and return 'customers/list' page.

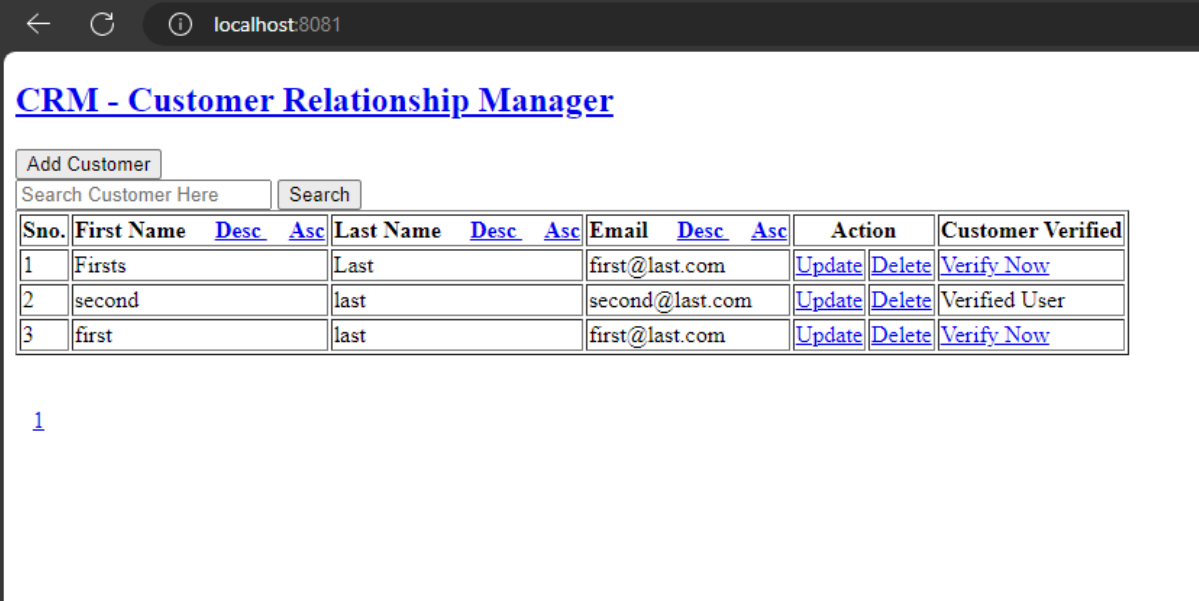

## 3 RESOURCES AVAILABLE:

---

Description	View Pages Name	Remarks
Common UI		
Home Page	list-customers	Contains a homepage which shows a list of all customers along with options to add, edit and search a customer.
Add Customer	add-customer-form	
Update Customer	update-customer-form	

## 4 SUGGESTED WIREFRAMES:

### 1. Homepage – Visitor Landing Page

The screenshot shows a web browser at localhost:8081 displaying the CRM homepage. The page has a title "CRM - Customer Relationship Manager" in blue. Below the title is a button "Add Customer" and a search bar with the placeholder "Search Customer Here" and a "Search" button. A table lists three customers with columns for Sno., First Name, Last Name, Email, Action, and Customer Verified. The table contains three rows of data. Below the table is a blue link "1".

CRM - Customer Relationship Manager

Add Customer

Search Customer Here Search

Sno.	First Name	Last Name	Email	Action	Customer Verified
1	Firsts	Last	first@last.com	<a href="#">Update</a> <a href="#">Delete</a> <a href="#">Verify Now</a>	
2	second	last	second@last.com	<a href="#">Update</a> <a href="#">Delete</a>	Verified User
3	first	last	first@last.com	<a href="#">Update</a> <a href="#">Delete</a> <a href="#">Verify Now</a>	

[1](#)

### 2. Add a Customer

The screenshot shows a web browser at localhost:8081/addCustomerForm displaying the "Add Customer" form. The page has a title "CRM - Customer Relationship Manager" in bold black. Below the title is the heading "Add Customer". The form contains three input fields for "First Name", "Last Name", and "Email". Below the input fields is a "Save" button and a blue link "Back to List".

### 3. Edit a Customer

← ↻ ⓘ localhost:8081/customer/updateCustomerForm?customerId=1

## CRM - Customer Relationship Manager

### Update Customer

*Fill out the form. Asterisk means required.*

---

First Name

Last Name

Email

[Back to List](#)

### 4. Search a Customer

← ↻ ⓘ localhost:8081/customer/search

## CRM - Customer Relationship Manager

Search Customer Here

Sno.	First Name <a href="#">Desc</a> <a href="#">Asc</a>	Last Name <a href="#">Desc</a> <a href="#">Asc</a>	Email <a href="#">Desc</a> <a href="#">Asc</a>	Action	Customer Verified
1	Firsts	Last	first@last.com	<a href="#">Update</a> <a href="#">Delete</a> <a href="#">Verify Now</a>	
2	first	last	first@last.com	<a href="#">Update</a> <a href="#">Delete</a> <a href="#">Verify Now</a>	

[1](#)

## 5 BUSINESS VALIDATIONS

---

1. Id must be of type id.
2. FirstName value not blank, min 2 and max 40 characters.
3. LastName value not blank, min 2 and max 40 characters.
4. Email value not blank and must be of type email.
5. Verify value should not be null.

## 6 CONSIDERATIONS

---

The Code template already contains skeleton methods for service, repository and controller layer. Please write your logic in it.

## 7 EXECUTION STEPS TO FOLLOW

---

1. All actions like build, compile, running application, running test cases will be through Command Terminal.
2. To open the command terminal the test takers, need to go to Application menu  
(Three horizontal lines at left top) → Terminal → New Terminal
3. To build your project use command:  
**mvn clean package -Dmaven.test.skip**
4. To launch your application:  
**java -jar springboot-crm-service-0.0.1-SNAPSHOT.war**
5. This editor Auto Saves the code
6. If you want to exit(logout) and continue the coding later anytime (using Save & Exit option on Assessment Landing Page) then you need to use **CTRL+Shift+B**-command compulsorily on code IDE. This will push or save the updated contents in the internal git/repository. Else the code will not be available in the next login.
7. These are time bound assessments the timer would stop if you logout and while logging in back using the same credentials the timer would resume from the same time it was stopped from the previous logout.
8. To test any Restful application, the last option on the left panel of IDE, you can find ThunderClient, which is the lightweight equivalent of POSTMAN.
9. This is a web-based application, to run the application on a browser, use the internal browser in the workspace. Click on the second last option on the left panel of IDE, you can find Browser Preview, where you can launch the application.

**Note: The application will not run in the local browser**

10. Default credentials for MySQL:

- a. Username: **root**
- b. Password: **pass@word1**

11. To login to mysql instance: Open new terminal and use following command:

- a. **sudo systemctl enable mysql**
- b. **sudo systemctl start mysql**

**NOTE:** After typing any of the above commands you might encounter any warnings.

**>> Please note that these warnings are expected and can be disregarded. Proceed to the next step.**

- c. **mysql -u root -p**

The last command will ask for password which is '**pass@word1**'

12. Mandatory: Before final submission run the following command:

**mvn test**

13. You need to use **CTRL+Shift+B** - command compulsorily on code IDE, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.
